SECTION 11 Toxicological information

Information on toxicological effects

| Inhaled | Not normally a hazard due to non-volatile nature of product Inhalation of vapour is more likely at higher than normal temperatures. The vapour from heated material is discomforting to the upper respiratory tract |
|--------------|---|
| Ingestion | Not normally a hazard due to physical form of product. |
| Skin Contact | Skin contact does not normally present a hazard, though it is always possible that occasionally individuals may be found who react to substances usually regarded as inert. |
| Еуе | Not normally a hazard due to physical form of product. |
| Chronic | The additives are immobilised in the rubber and do not present a hazard during handling at room temperatures. Long-term exposure to the product is not thought to produce chronic effects adverse to the health (as classified by EC Directives using animal models); nevertheless exposure by all routes should be minimised as a matter of course. |
